

The SMART Green Pest Program for HOAKA is designed to end your worries about termites and pests at Kukio.

With SMART, you're getting a full-service, green company founded and based in Kona. Hoaka's monthly pest control program is based on standards set by the Environmental Protection Agency (EPA) designed to reduce risk to family and pet safety, and to minimize the impact on the environment.

The SMART Green Pest Program includes the following:

-  Comprehensive identification and analysis of pest threats for each property with a specific plan of action for each.
-  Perimeter treatment that creates a border around the property to discourage pests from getting close to your home.
-  Rodent baiting, if necessary.
-  Carpenter Bee and wasp remediation.
-  Pest control treatment with minimum toxicity—every product we use is listed on the EPA Reduced Risk Pesticide Program.

The SMART Green Pest Program is **different**:

-  The EPA Reduced Risk Pesticide Program adheres to a higher standard than conventional regulations followed by most pest control companies in Hawaii.
-  Most pest control companies flood your property with noxious chemicals.
-  By contrast, SMART has identified the specific pests at Kukio and treats only for those pests.
-  We apply our knowledge of the pest habits, life cycles, and vulnerabilities.
-  This allows us to target and treat effectively using more eco-friendly methods.
-  Monitors pest activity and adjusts treatment methods as necessary.

Why The SMART Green Pest Program **matters to you**:

-  You never have to worry about your kids and pets.
-  You will have fewer pests in your home.
-  These methods reduce impact on the Hawaiian ecosystem.
-  The price is increasing because green methods cost more, require more skilled technicians, and take more time.
